

Developer Cheat Sheet

Terminal Basics

ls / dir: List files in current directory
cd <dir>: Change directory
mkdir <dir>: Create a new directory
rm <file> / rmdir <dir>: Remove files or directories
cat <file> / type <file>: Display file content
curl <url>: Transfer data from or to a server

Git Commands

git init: Initialize a new Git repository
git add <file>: Add file contents to the index
git commit -m "message": Record changes to the repository
git status: Show the working tree status
git log: Show commit logs
git diff: Show changes between commits, commit and working tree, etc

How to Run Tests

Python:

pytest: Run all tests in current directory
python -m unittest: Run unit tests

JavaScript/Node:

npm test: Run test script defined in package.json
